

STATIC & MOTION WEIGHING

Portable System

portable low weigh in motion provides a complete and portable system to realize a correct and accurate weigh control at any required moment.

This turnkey solution is designed as a whole portable station to be prepared in an easy and fast way.

portable system integrates thin platforms, different indicator options and GesDyn software associate to manage the data.

Purposes

- Enforcement of weigh limits
- Bordercross weigh control
- Easy and fast portable solution

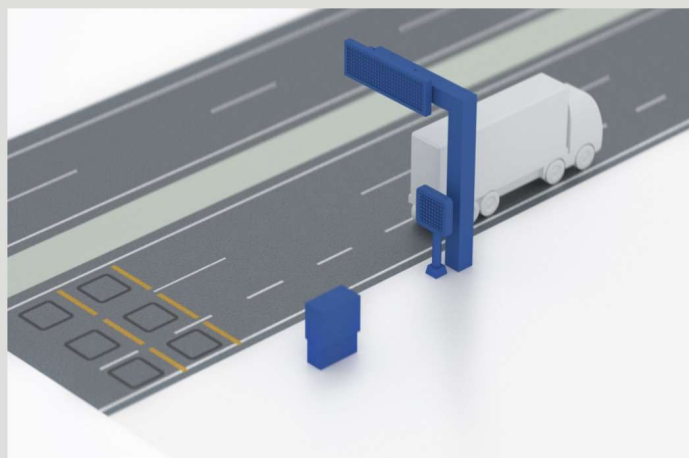

Station

has a certified system for a complete weigh in motion station for traffic control and industries.

Weigh in motion system with BPPEM axle weighing manufactured or/and PM weighing platforms is a complete turnkey solution for a weighing station needs.

Purposes

- Overload control to traffic security (Law enforcement application)
- Monitoring and data collection to analyze the traffic weigh statistics
- Weigh limits' enforcement (after preselection)
- Toll roads by weigh
- Border cross weigh control
- Research (post analysis of the uses of roads to be proactive to improve pavements)

High Speed System

High and medium solution has been designed as a complete and innovated solution for overload detection and preselection for enforcement control process.

ACCURATE PRESELECTION TO EFFICACIOUS ENFORCEMENT

- Reliable preselection in High Speed
- Complete system and station
- Multiple weighing options
- High accuracy stations to enforcement
- Double tire detection possibilities
